

I am an XM satellite radio listener and also a DISH network satellite TV customer. I travel around the US and am sick of poor signals, local overrides, daytime/nighttime signal strength changes, the intrusion of Mexican signals at night, etc. I love the independance of satellite radio and TV. I love choosing what I want to listen to and I love HIGH QUALITY. For years I have been fighting with all the stupid outdated rules related to satellite television. I cannot get what I want. I was and am excited about satellite radio. Now I understand that there is industry interference brewing with satellite radio. Please, let the business succeed on its own without interference from the bloated locals and networks that want to control my life. REJECT NAB's petition 04-160 and oppose HR4026!

Let satellite radio do what it wants to. It will succeed and it will force locals to spruce up their coverage, signals and content. Thanks, Jack Korber
